

Sprint 1:

1. Create database and tables.
2. Connect the database to the project.
3. Create models classes.
4. Create a database utility class to retrieve data.
5. Create login page.

Sprint 2:

1. Create JSP files for all pages of the project.
2. Create a servlet to get requests and send responses to the JSP files.
3. Create a CSS file to format the contents.
4. Debug and Test the project.
